## WARNING POSTS

CDT Underground, LLC., supplies Pro-Mark utility warning posts used to identify underground fiber optic and utility system locations. Warning posts are highly impact resistant, 100% recyclable and resistant to chemicals. Warning posts are available in a dome style which can include cathodic protection terminals or in a flexible flat design. The graphics of Pro-Mark utility markers come with a guarantee not to fade, peel or chip. Custom graphics are available to meet customer specifications and US Department of Transportation regulations.

Pro-Mark warning posts are available in a variety of colors and combinations and are packaged on pallets.

The Dome Marker Post PM-303 is 3.5" in diameter and is available in all standard lengths, colors and comes with anchor bar. The marker is also available with a PM-TS3 Test Station or vent.

The PM-301 Flexible Utility Marker is made from high impact fiberglass reinforced resins. The marker has a three rib profile design, will flex on impact and return to its original upright position without cracking or splintering. The flexible warning post is 3.85" wide available in lengths of 66" and 72" in all standard colors. Custom reflective and non-reflective decals can be installed on both sides of the marker.
