MULTI CELL DUCT PLUGS

CDT Underground, LLC., supplies ETCO's Multiplex Duct-Loc Plugs which are a split, compression plug designed to organize and seal around existing cable or innerduct inside a round opening. An elastomeric gasket is compressed between squeeze plates made from high impact plastic or stainless steel plates using stainless steel hardware. The Multiplex Duct-Loc design enables quick installation and easy retrofitting in vaults, manholes and cabinets.

Multiplex Duct-Loc plugs are available in sizes 4" to 6" in 3-way and 6-way configurations.

Markets served by CDT include CATV, telecommunications, utility and DOT.
